**The reason of Environment's pollution and solutions**

One of the greatest problems that the world is facing today is **that of** environmental pollution, increasing with every passing year**,** ~~and~~ causing grave and irreparable damage **to** the earth. Environmental pollution consists of various types of pollution, namely air, water, soil, noise and light. It seems, there is certainly not a panacea for completely eradicating this issue but some solutions can be implement~~ed~~ to mitigate ~~……~~ Some of which ~~them~~ are outlined below.

Air pollution control is the **uppermost** priority of the authorities that should be taken into consideration. Dangerous fumes/smokes which are emitted by cars, buses, trains and factories are key components in ~~to~~ pollut~~ing~~e the air; therefore some preventive plans should be adopted by the government. Increasing the cost of petrol is one of the preventive plans that not only convey people using public transportation reduces traffic congestion but also saves resources for ~~to~~ future.

 Moreover, ~~More over~~ Industrialization is one of the most important reasons to pollute environment. By developing small factories, the air condition may be aggravated. In addition some factories due to lack of appropriate rules dump ~~flow~~ their wastes in ~~to~~ rivers and contaminate water. Noise pollution~~s~~ is ~~are~~ the other aspect of this phenomenon (industrialization). For modifying the detrimental effects of this issue some prohibitive policies should be adopted such as limitation in working hours or imposing ~~taking~~ harsh punishment for those factories which cause environmental pollution.

Although, these preventive policies play a key role in ~~to~~ diminishing the environmental pollution, some incentive cultural **plans/schemes** besides preventive ones are needed to urge ~~promote~~ people to save the environment. In can be concluded that a sustainable development in countries is linked to the conservation of the environment from all detrimental substances especially pollution.
