

## Using a computer everyday can have more negative and positive effect on young children. Do you agree or disagree?

Nowadays many adults are spending lots of time on the computer. It can lead to pros and cons.

~~In At~~ my view, the latter is more effective than the former. It is true that using the computer can be helpful in children's life, there are, indeed, several benefits to utiliz inge the computer. It helps them with mak inges inferences and drawing conclusion for them. In addition, computer activities enhance the initiative power. Moreover, they can gain practical experience every day.

But I also believe that the negative effects have has more power than positive effects. In my opinion opining, children need to physical and mental activities. Adulthood plays a key role in their life and makes shapes their character in the future. So using the computer increases leisure time because it has been designed to be entertaining. To put it simply, addiction to the computer takes place soon and more use is most using is most applauded. They use it out of from the force of habit and other activities will be postponed. take a rain check.

Besides, computer encourages antisocial behavior. First, it shows itself the same as a close friend and then poor children don't want to break with its. Furthermore, idley playing leads to lot of physical and mental problems. In addition, attraction and complex systems in the computer, blocks avoiding children's creativity. Simply put, speaking, \_ programmers planner thinks about all of the aspects.

In conclusion, I believe that overusing computers s damages children's future, so parents must persuade their children that they can enjoy other kinds of activity and learning ing how to live in the virtual world.
