

**95.02.03 Workshop FRI Session 03 - Outer Space**  
**Telegram Channel : @sabaitc**

The link :

1. One fellow **expert on** mars
2. Quite **feasible** for humans to live there
3. **In the near future**
4. If we spent the billions of dollars that **go into SR**
5. **Look after** our own planet
6. We wouldn't **need to** worry about the earth being **uninhabitable**
7. **Nor would we need to** look for another planet to **colonize**
8. **Still**
9. I **don't see why** they have to send astronauts into space
10. Robotics **has come a long way**
11. Send a **manned spaceship** into orbit
12. Can't **react to situations** independently
13. Must be programmed for every **eventuality**
14. They **need us to** tell them
15. **Go to all the expense of**
16. **Make sure**
17. **Tend to** take risk
18. What if it **lets you down**
19. **Extremes of temperature**
20. **Create** an awful lot of **interference**
21. Issues that **can be dealt with**
22. **How far away it is**
23. **Contemplate ....ing**
24. **Must have started** them never expecting to see them finished
25. **Take the same approach**
26. You don't **foresee a time when** humans ....
27. I'm **still not convinced**
28. **Not at all**
29. There is a **distinct possibility**
30. Build a **self-contained structure**
31. Many **risks involved**
32. **Shield us from cosmic radiation**
33. I **can't agree with you there**
34. That shouldn't be **too much of a problem**
35. It is **within the realms of possibility**

36. I **have every faith in** science

37. Mars does seem to be **the next frontier**

38. We will **eventually** send a space mission

Good luck!
