

Global warming is one of the most serious issues that the world is facing today.

What are the causes of global warming and what measures can governments and individuals take to tackle the issue?

Today, ~~the rise in the temperature levels rising the temperature~~ of the earth is a worldwide concern which all countries are facing and now they have found that it can influence our existence and we have to take giant steps to solve this problem. Measurement of some critical climate changes will show the impact of global warming on our environment.

One of the basic influences of global warming, which some say is the consequence of our misbehavior ~~towards with~~ our environment and others say that is a periodic condition of the earth, is ~~the decline in decreasing~~ the amount of rain ~~in~~ around the world and a ~~considerable/sensible~~ reduction in the amount of fresh clean water resources especially in Asian and African countries. Some counties which have had snowy months during the winter ~~until~~ now, ~~are beginning to~~ have warm winters with ~~much less no~~ snow and it causes a huge desertification.

Although ~~the increase in increasing-of the~~ planet temperature according to NASA diagrams is a small number (almost 0.8 centigrade degree), it ~~has caused~~ an extreme increase in mean sea levels around the world and ~~a~~ decrease in ~~the~~ amount of coastal ~~areas~~ under use. ~~ing lands~~. This problem is more worrying in countries such as Canada or in big cities which are coastal.

~~The~~ Earth's warming and consequently climate change ~~ing~~ causes harsh water and air transformations which leads to new kinds of storms and sea waves which destroy many infrastructures and cause crop ~~failures fails~~ around the world annually.

Another impact of the earth warming is ~~a~~ reduction in the amount of arctic ice area and it is decreasing almost 15 percent each decade and with ~~the disappearance disappearing~~ of these ice mountains many animal species surrounding them are disappearing too, and these are ~~irreversible not reversible~~. Then we ~~are~~ all ~~are~~ in charge of climate changes and should ~~do something great take immediate action~~ and reduce the amount of carbon dioxide and fossil energy use ~~ing~~.

Consequently, governments and individuals with a quick look at the destruction  
~~destroying~~ rate of the earth on some the organizaions enterprises such as NASA's website  
will sense find the catastrophe, and ways to tackle it are is clear.
