

**Many parts of the world are losing important natural resources, such as forests, animals, or clean water. Choose one resource that is disappearing and explain why it needs to be saved. Use specific reasons and examples to support your opinion.**

**The Earth is much older than the human beings, however we have managed to destroy many precious natural resources. We have polluted the air; we are poisoning our water sources; removing forests. All these resources are in limited quantity and are vanishing quickly as days are passing by. In my opinion, clean water is one of the natural resources which have decreased and should be saved.**

**Firstly, in this era, every country is trying to become a super power in industrialization and globalization of the economy. But in this competition they forget about the most important natural resources, which are depleting. Big industries are emitting waste materials directly in to the seawater and polluting it drastically. Many fishes and species living under the water are dying because of this and harmful gases are destroying our environment too.**

**Secondly, in many developed countries, there is no proper law for dumping the industrial and sewage waste. Consequently sewage and industrial waste is getting dumped in the oceans regularly resulting in contamination of whole ecosystem. The**

**marine animals such as fishes consume the waste and human beings consume those fishes, which sequence in serious health conditions damaging the whole food chain. In addition, the supply of unfit water to many societies which causes many serious health problems like malaria, dengue and other diseases.**

**On the other hand, one of the basic needs of daily living beings in this world that cannot be separated is clean water. Water is one of the resources that is needed by all humans because of its' essential role in humans' life such as drinking, bathing, washing, and so on. Humans cannot live without water; clean water would be required so that people can maintain their health. However, the condition of the water this time it began to decrease due to excessive use. For the use of water should remain limited and keep in balance.**

**In conclusion, I believe that every country must focus on the sustainable development of fresh clean water but with increasing in the population growth in developed countries and the demands of the agriculture and industrial usage have made it difficult for the Governments to provide sufficient clean water for the people.**
