

As computers are being used more and more in education, there will be soon no role for teachers in the classroom.

Using computers has been spread in all aspects of life in recent decades, ~~and in that case;~~ the learning process is not an exception. Some assert that computers will be a great substitution for teachers, while others believe that computers could merely assist learner's access to more information and credible data easier in short time, so ~~yet~~ the teachers still play a vital role in acquiring knowledge.

To begin with, no sensible person could deny the role of interaction between students and teachers for acquiring new skills and science. Not only could adept teachers accelerate the learning process, but also the students are more likely to be influenced by their teaching and attitude to the extent that they can follow the subject which was taught by their beloved human teachers. In addition, real classrooms and teachers are considered more serious than virtual ones. Therefore, students spend more time and accuracy on their studies. Besides, ~~that~~ the educational instruments and facilities cannot be ignored which are available for teachers in comparison with ~~beside~~ online classes.

On the other hand, learning with computers s and through the internet seems more interesting and relaxing than sitting on an uncomfortable chair for a long time and listening to the teachers continuously. Furthermore, commuting to reach the classrooms is too time-consuming too time-wasting program that every student prefers to eliminate it in any way. Last but not least, in most cases the tuition fees of online classes are cheaper compared to traditional classes. Hence, they are tempted to choose them.

In conclusion, while some people argue that real classes and teachers will ~~be~~ vanished in near future, some others **cite** the quality of real classes as a great advantage which virtual classes cannot be competitive with them. I, myself, believe that new technologies as computers and the internet are two precious sources for our society in all aspects especially teaching. However, they cannot **pale the significance of** seasoned teachers, so by with applying them in real classes all learners will benefit more than one single method.
