

68- Many teachers assign homework to students every day. Do you think that daily homework is necessary for students?

Disagree: 1- school should enhance creativity such as 2- responsibility towards of pet, family members 3- desired activity mingle, pleasure

In our contemporary era and especially in developing countries choosing an efficient teaching system has become a controversial issue. Furthermore, the quantity and quality of homework is another important matter. In the past there was a misconception that ~~the~~ more assignments would will result in nurturing more qualified persons in the future. I myself believe that everyday homework may have adverse impacts.

First and foremost, it is worth bearing in mind that the mission of schools is far more than teaching and learning. On the other hand, today's schools s have to identify diverse students' capabilities. Psychologists have concluded that conventional teaching systems immerse students in with a lot of homework and suppress both students and teachers to discover their innate abilities. Thereby, in most developed countries not only do teaching systems provide spare time for students, also they inspire them to use their genius to devise novel ideas. I would like to stress that many of the inventions sparkle while the brain is during wandering ~~brain~~ among diverse issues.

Secondly, schools, though much smaller, s are samples of future society. Therefore, socializing is an indisputable part of education. On the other hand, how can we expect to have successful business managers s, attorneys s and lecturers s without dedication of enough time and providing ing opportunity for mingling students s with one another? In addition, being excessive in studying, pupils just bring up one dimension of their personality and are more susceptible to mental disorders like obsession and depression.

And last but not least, teaching experts believe that homework is one of numerous methods of learning, s but and there are more productive ways in learning unfamiliar fields s of study studies. Take physical experiment as an example, s students learn with more ease rather than just doing theoretical homework. I maintain that diverse ways of learning complement each other.

To put it in a nutshell, were I to choose between the options, I would oppose contradict the daily homework, since it restricts students just to studying ing and they do not have the opportunity to discover and rear their intelligence in various fields.
