

## **What are the main tasks of universities: to offer students' knowledge and skills essential for their career, or to provide students with access to knowledge itself? What do you think university education should contain?**

Fast-Changing world nowadays required societies to be adapted to modern technologies. It is undeniable that universities play a vital role in this manner. Indeed, universities not only are improving youth's academic knowledge but it is also developing the culture of community. I personally, believe that besides basic sciences, it should be very useful to possess professional trainings.

Modern economies place a premium on educated work forces. In other words, employees who obtain higher education will be given priority over who are skilled just only biased on experience. The most important cause is workers are highly demanded on ability to operating high tech equipment. Thus they should possess good enough knowledge in computer and software science, mathematics and so forth. However, the university is the best place to keep abreast of high standard occupations. Evidence From official statistics indicates that job seekers who have been passed extra training courses have more chances to obtain better job positions.

Sometimes we find university's courses a bit boring, or probably it seems that basic sciences like mathematics, physic, statistic and others, are not useful for our future. But in real, these not only are the best training for students brain and make it sharp but it is also will help them to solve the confuse upcoming problems in their real life in the future. On the other hands, it is undeniable that higher education is really mandatory to keep yourself in high quality standard of living.

In conclusion, university is the best place for improving community members to acquire higher level of life quality. Likewise, In comparison with others who do not have academic education, university-educated skill workers, have a good chance of better life.
