

**Developed countries have created many environmental problems in the world particularly in their contribution to global warming?**

**What can be done to reduce the dangers of global warming?**

In this time of dispiriting headlines about horrible environmental damages that we and e specially advanced countries have **inflicted** upon our habitant-habitat and its catastrophic consequences such as global warming, some believe that there is still hope for our planet earth to survive. Although it requires us to take a pledge to dedicate effortless series of decisive actions to bring an end to this invasive problem that every country has been grappling with.

First and foremost, we should control global warming as one of the most disastrous environmental phenomenaa which is inherent in our industrialization policies we have adopted since the past century. For instance reaching international agreements between powerful countries with the aim of reducing harmful and polluting industrial emissions deter them as well as other countries from producing more green-house gases as the major contributor to sudden raises-rises in earth temperaturess.

In the second place, countries should focus more on altering fuel-fossil fuels with the green energies, namely solar and biochemical fuels. Therefore, they need to invest more financial and human resources on-in researches with the aim of replacing fuel-fossil fuel or enhancing energy consumption efficiency. Moreover, all governments should raise their people's awareness in regard to global warming as well as other dangerous environmental changes and persuade them to reduce their carbon footprints by using more environmental-friendly vehicles such as bicycles or electronic cars.

Overall, admitting and understanding the fact that our current situation is an unwanted byproduct of our inconsiderate and-ambitus actions shed light on the question "what can be done to reduce the damages of global warming? "Hence, we have no choice, but to be cooperative and device- devise an international and comprehensive plan to overcome our environmentally ly threatening activities, otherwise .-Otherwise, we will certainly put all human kind's-kind existence in a serious danger.
