

A large number of deaths are caused by road accidents. Why do so many road accidents occur? Make recommendations that would help to reduce the number of road accidents.

Considering the reports issued by international organizations such as WHO (World Health Organization) and the World Bank, road accidents are roughly identified as one of the major ~~ertain~~ causes of mortality in many countries including Iran. There is a globally widespread agreement on a wide range of cultural, industrial, engineering and medical factors which lead to deaths as a consequence of road accidents.

Firstly, Iranians-drivers don't respect driving safety rules. For example, we have rarely seen some ~~a~~ car drivers who fail to fasten ~~ed~~ their ~~his~~ seat belt or a motor driver putting his helmet on. Further to the advices of Police and Medical Experts, such drivers would have more serious injuries after an accident. They always say that: "If they followed safety rules, they wouldn't have had such physical damages."

In recent years, the responsible organizations such as Ministry of Health and Police have started certain efforts to alert the all members of families by different approaches. As an example of cultural measures, they began awareness-raising campaigns and training the children as "Family Police in Police Schools". Also, financial penalties ~~the amount of fines~~ have ~~has~~ been dramatically increased as another effort to decrease the driving violations.

Also, driving low quality vehicles is recognized as another main dangerous root of deadly road crashes. Unfortunately, several well-known and high quality global suppliers ceased their relation with Iran as a result of sanction. Consequently, they neither ~~didn't~~ provided spare parts nor ~~neither~~ after sales' services. At the same time, the brand new vehicles were forbidden to be sold to Iran, so ~~So~~, the domestic manufacturers have used low quality parts. They have ignored safety rules as well. For example, the air-bags are not installed in cars. We hope that by lifting sanctions, the production line of well-known companies would be established under their ir license and supervision ~~of Mother Company~~ to produce local high-quality vehicles.

Furthermore, traffic and civil engineering have a great role in ~~to~~ preventing accidents in urban areas. Low-quality roads and highways as well as several existing dangerous accident points rise ~~raise~~ the accident rate. the knowledgeable engineers should prepare devise a professional plan to fix weak points.

Besides, improving weak medical emergency services after accidents and knowledge of the people about management of accident cases could reduce the rate of mortality.

In conclusion, ~~our~~ governments and people are both supposed to cooperate and put serious effort into eliminating the deaths caused by road crashes.
