

In some countries it is thought advisable that children begin formal education at four years old, while in others they do not have to start school until they are seven or eight.

How far do you agree or disagree with either of these views?

In this day and age, the importance of literacy ~~literation~~ is undeniable ~~not-unapparent to anybody~~, whereas doubts about the age of starting pupils' nurturing have raised controversies regarding this issue.

Some people believe that instructing children from early ages, around four or five years old, would open their eyes to the new horizon of words earlier, and it might open them a gate to the world of science and knowledge. Besides, attending at classes and interacting with their peers would hone their social communicationg skills. Therefore, starting children's education as soon as possible will help them to know their world earlier and nurtures a the sense of collaborating inside their souls.

On the other hand, critics claim that children start to know the world which surrounded ed them by touching, smelling and even tasting its pieces. They must have enough time to accomplish their recognition. The sooner you send them to school, the weaker their knowledge about physical world will be. In addition, experiences of adults who m have been sent to school earlier than their mates reveal that they all have regrets about the childhood playing.

In my opinion, although education is the most important and valuable part of every child's nurture, starting it from early ages might adversely affect their attitude toward pedagogical programs. I certainly believe that if there is an educational plan for very adversely affect their attitude toward pedagogical programs. I certainly believe that if there is an educational plan for very young children, some conditions should be considered. Firstly, these types of educations would not be shaped in formal classes and should be fun and mixed with games. Secondly, they must improve their ir cooperating ability among children.

In conclusion despite the fact that schooling in early ages might appear to have some benefits, some certain circumstances should be prepared so that they enjoy the benefits. ~~affect beneficially.~~
