

## Task:

Some people say that it is possible to tell a lot about a person's culture and character from their choice of clothes.

Do you agree or disagree?

Nowadays we can find different wearing styles among people. Some assert that these wearing methods are ~~the~~ a reflection of their both personality and customs, while others claim that their choice of clothes is affected by fashion and some environmental restriction. From my point of view, wearing methods to some extent ~~ed~~ are is a reflection of people's character and culture, but it is not totally true.

Firstly, in many countries and societies there are many rules and regulations in terms of the clothes type, so partially it shows their culture but not work for the majority of citizens. For instance, in many Islamic countries wearing a special style such as scarfs and veils is a must for women, while this is not their favorable wearing methods, hence we cannot ~~can not~~ judge their culture and personality by this method.

Secondly, many assert that fashion ~~have~~ has a great influence on the wearing style. In many societies culture is paled by fashion and individuals do not have any tendency to their customs, so the most important issue among them is following fashion. This means that it is really difficult to recognize their personality and culture. For example, in last decades the colour of the year ~~was~~ is introduced by Polimode University in Italy, thus many individuals just wearing ing such a color because of mode.

All to all, I strongly believe that because of today's life style and people's attitude, it is quite difficult to understand either customs or character by their ir choice of cloths. I suppose we just received d surface information about the culture and personality by studying the wearing methods of society.
