

Joblessness

Today one of the most major problems in this century especially in poor countries ~~is are~~ joblessness that ~~is are~~ bothering most of the people ~~who in-~~ ~~which~~ live in these areas.

Joblessness is one of the current concerns of economists around the world and they are always looking for finding solution for this complicated issue that involves most people in these countries. Before that scientists believed this is just financial or economic difficulties but in the coming years , they found that this is not only economic but also a social uphill , because joblessness leads to poverty , addiction and break down family that are common issues in these areas.

But some countries could overcome ~~with~~ difficulties in these decades especially in south east Asia such as ~~China china~~ and ~~South south~~ Korea but for another part of the world the problem ~~is~~ still remains such as west Asia and Africa ~~whose that their~~ governments looking for finding the solution to get rid of this issue forever. Some economists believe that if the government of these countries would be able to raise people ~~purchasing power buy power~~ that will easily eradicate this uphill issue

I strongly believe if these countries spread social security among the whole people, they will be able to overcome ~~with~~ this problem forever.
