

Task:

Some people think that all university students should study whatever they like. Others believe that they should only be allowed to study subjects that will be useful in the future, such as those related to science and technology.

Discuss both these views and give your own opinion?

Education is going to be a controversial issue among individuals. While some believe that it is more beneficial for pupils to continue their education in certain majors, other assert that **they students** should have **the** liberty to choose their field of study. This essay will discuss both views, **and** presenting the author's view at the end.

Some claim that as technology and science change the life-style, future belongs **s** to them, so it is more beneficial to society to force students **to** follow their education in these fields. They believe that **with by** this attitude we will guarantee the next generation of inventors and scientists. Needless **s** to say, there are many merits for individuals who are experts in these fields since there are a lot of job opportunities and demands for these kinds **s** of employees. For instance, in many up-to-date factories labors are replaced by robots, so maintenance engineers and innovative scientists to create novel robots are in high demand.

In spite of these arguments, opponents assert that students should have freedom in **terms-of choosing/selecting** their major and they should attend to their desires. They claim that ability and enthusiasm are decisive factors **in for** being a skilful expert. For example, from a custom **s** point of view, in my country many parents **have make** their kids continue their major in technical or scientific fields such as **medicine medial-course** or engineering **study**, while children are not interested in **these this** subjects, thus we will have a lot of university students who are either frustrated or incapable **of to completing terminate** their study.

As a conclusion, I strongly believe that students should be free to choose their future occupation since they know their strength **s** and weakness **es** better than anyone else. Moreover, societies require teachers, artists and law **yer** **s** besides scientists and engineers.
