

TOPIC:

Using animal to test safety of cosmetics or drugs used for medical reasons is never acceptable. To what extent do you agree with this statement?

One of the most important areas of concern for producers is ~~that~~ whether new products which ~~are~~ going to be released within the market are safe for human use or not? A common practice regarding this issue is to test ~~them the products~~ on animals which leads to increasing ~~ing~~ arguments between people. Some people support this idea while others find ~~it that~~ unacceptable.

People who reject this idea find this method completely unacceptable. They argue that animals have the right to live their lives and we are not allowed to consider their lives less important ~~(inferior to)~~ than humans. Besides, these experiments cause discomfort, pain and death which could eventuate ~~in to make~~ some animal species' ~~extincttion~~. The opponents ~~of to~~ animal testing maintain that not only is it cruel, but also it is unethical.

On the other hand, it is deniable that animal testing can assist scientists ~~in discovering to discover~~ new treatment procedures ~~s~~ for serious illnesses like cancer. The supporters of animal testing believe that many medical treatments have been developed from experimental research with animals conducted by scientists and many lives have been saved in this way.

From my perspective, despite ~~of~~ disorders caused by animal testing, I would agree that there are some benefits ~~to of~~ using animals to test medical discoveries which reveal that advantages outweigh the disadvantages. On the contrary, using animals ~~s~~ for cosmetics ~~purposes reason~~ is a ~~deplorable/unacceptable practice critical area in~~ which governments ~~s~~ must make every effort to ~~minimize reduce~~ it.

In conclusion, testing on animals would be acceptable as long as ~~it is to be~~ kept to a minimum and ~~is to be~~ used for essential and scientific reasons not for beauty and cosmetics products.
