

Increasing the price of petrol is the best way to solve growing traffic and pollution problems.

To what extent do you agree or disagree?

What other measures do you think might be effective?

The augmented traffic issue is a phenomenon which has become a controversial global problem. It stems from numerous key factors which have been the results of developing process in great numbers of countries. However, some countries have got the rein of the traffic issue by means of several strategies. Raising the price of petrol and make a restriction against overt fuel consumption is one of the solutions. Nevertheless it is by no means certain to be a permanent resort, neither does it guaranty to solve congestion and air pollution matters thoroughly.

Unfettered population also gives rise to heavy traffic and contamination of the environment. The more population, the more fuel consumption demands. Even though there should be birth controlling considerations for succeeding generation's sake, they would not be the quick fix.

It is worth bearing in mind that poor transportation system leads to increasing vehicle jam, as well as improper roads and infrastructures. Hence, establishing efficient plans for maintaining the road networks with suitable facilities. Moreover raising the cities' capacity for construction more subways and even sky trains which let people to have various choice of inter-city travelling, brings about the drop in using personal automobiles which provide grounds for the heavy flux of vehicles.

Despite setting out thorough public transportation approach, in order to supply the high demands of personal cars, it is better to encourage the industrial designs' concepts in order to produce smaller cars with less fuel consumption. There is a contentious issue which its main intention is to increase the usage of clean energies that could be functional in wide range of purposes. Conspicuously a main case in point could be transportation which necessitates excessive amount of energy.

To put in a nutshell, considering the district measures such as raising the fuel price could be though as a reinforcement to develop people's attention to other transportation systems' options. But it is not a panacea. Besides, government or other systems in charge, had better establish strong infrastructures to fix heavy traffic and air pollution issues sustainably.
