

**Governments should spend money on railways rather than roads.  
To what extent do you agree or disagree with this statement?**

Some people believe that the investment in enhancing ~~on~~ railways is more effective, while others perceive that the majority are using their own private cars in the roads. In my opinion, railways are ~~perceived included~~ as public transport amenities which should be ~~seriously considered mentioned deeply by the government~~ ~~from nations' side~~.

On the one hand, the majority of people tends to travel ~~in by~~ their own vehicle; consequently it would be preferable ~~focus on road improvement to invest in-~~ ~~enhancement of roads~~. ~~The safer the roads are, if the roads become safer~~, the more accidents ~~from travel~~ would be avoided otherwise it provides ~~through the roof excessive~~ expenditures for the government. In addition, ~~it could be as an effective measure~~ improving the industries and international trading which play a vital role in ~~rising-~~ ~~boosting the economy economic~~ of a country. For instance, one country can export heavy products such as cars by trains in a higher rate which has a direct proportion with economy.

On the other hand, the conservationists perceive that any develop~~menting in on~~ public transport, such as buses and trains and railways contributes ~~to~~ reducing the emissions of carbon dioxide. The ~~higher the quality more-qualifier of~~ rail ways ~~between among~~ cities, the ~~more convenient would be travel~~ ~~travel would be more-straight~~, ~~and~~ even cheaper and also more amusing for the passenger. In addition, ~~it would be as a positive~~ ~~rei~~enforcement for them to use public transport instead of private cars which leads ~~to~~ ~~the~~-heavy traffic. In addition, ~~there it~~ would be more job ~~vacancies vacation~~ in neighboring cities for people who are looking for ~~them~~ since they can go easily to work by high-speed trains in a reasonable time, consequently this phenomenon avoid ~~of~~ huge migration to big cities just for unemployment in other regions.

In conclusion, ~~however-although~~ the people are more comfortable to travel ~~in by~~ their own cars via roads, any measures taken ~~for/on~~ improvement of public transport such as railways is in major priority since it leads to tackl~~ing e\_-with~~ air pollution, ~~raising rising-~~ the security of travels and impact on economy of a country by international trades which is only feasible with countries nearby via railways.
