

Many childhood diseases can now be prevented through the use of vaccines. Should parents be made by law to immunize their children against common diseases or should individuals have the right to choose not to immunize their children?

---

According to a the recent study in science and medical enhancements, vaccines are one of the most vital human-made inventions tackling a wide range of fatal diseases. Nevertheless, some parents refuse to vaccinate their children for various reasons, the rights of decision-making by parents should be taken by law to provide medical care for a child.

Some parents skip vaccinating their children which leads to their offspring facing the preventable illnesses. Unfortunately, the families with low levels of education might have been misled by faulty information hearing from friends and neighbors. There are also the other groups of families fearing of the gentle side effects which are produced by vaccines such as fever, they held hold the mistaken belief that not only might these might have benefits for the babies' health but they also would trigger some diseases such as Autism.

Although, individuals have absolute authority to make all decisions for their children, it would be more beneficial to take the medical-decisions away from the families which might put the children at risk of death. Firstly, these basic illnesses prevented protecting by vaccines contribute to a better life as an adult and prevention of preventing of becoming an epidemic in the next generation. For instance, chicken pox has not been seen as a fatal disease factor. Secondly, the more prevention with lower cost, the more budgets for to investment in other medical aspects such as coping with modern diseases such as AIDS with even frightening name known as a growing death killed factor in recent years or manufacturing the complicated medical instruments in diagnosing the unknown diseases in human body. Finally, if these simple preventable illnesses were not have not been controlled in the past at in an early age, the adults who are now involved might provide other problems in society and even for families, consequently, this would be the government's responsibility to take care of them in hospitals or medical care centers. Furthermore, they would need some technological facilities to live like as other citizens who which all impose have excessive expenditures for states.

In conclusion, immunization of the children by vaccine is one of the most important medical achievements which has had significant impact on longevity/life span/life expectancy /the length of human life, so it would be preferable to be assured all children would benefit from this important action ~~it~~ by introducing ~~posing~~ laws and taking the rights of decision-making away from parents who might neglect it for various reasons.
