

Do you agree or disagree with the following statement?

When teachers assign projects on which students must work together, the students learn much more effectively than when they are asked to work alone on projects.

Use specific reasons and examples to support your answer.

Team-work or working alone? It has been one of the most controversial disputes/ disputations between psychologists and behavioral sciences experts recently. Some educationalists think that by working together in a team students can gain more invaluable knowledge and learn efficiently. However, there are people who think that by working alone one can be more result-oriented and have better results than those of in a team. In my opinion, I think that by working together students can be more effective.

Firstly, when teachers assign a group of students to work on a project, not only do the students learn from each other's experiences and knowledge, but they will find out ~~found out~~ how to address an issue on more sophisticated situations and know how to cope with difficulties in a group. Based on a study conducted by JIS/RIT School of behavioral sciences, the students who which have has had more experiences working within a group were was more successful gaining crucial information and consequently within their career. Moreover, when students work together on a project or a research they can share their ideas and knowledge in a certain area, so they learn from one another ~~each other's~~ in order to make the a best decision for the outcome of a project or research.

On the other hand, however, one might say that when individuals work together, there is plenty of ~~are a myriad of~~ wasted time arguing with other members of a group, so when people work on their own they are more successful and more result-oriented. Although from my points of view, working alone has it's ~~its~~ own merits, working in a group has its own upsides and students are more passionate to work on a project when they observe that their efforts are vital for the an outcome of a project.

In a nutshell, I personally think that the advantages of working in a group far outweigh the upsides ~~those~~ of working alone on a project. By giving the opportunity to students working together not only would they would learn more effectively, but also they we could develop a sense of responsibility and managing conflicts in them, so from my own experiences I can draw a conclusion that team working is a more rational **approach** towards teaching (edifying?) the essential information to the ~~for~~ students.
