

Living much longer in the future will be a great benefit to everyone . To what extent do you agree with this statement.

Over the last half century, scientists have conducted ~~embark on~~ many ~~some~~ investigations to address the issue of human ~~being~~ life-expectancy . In my opinion death is an inevitable matter which has no escape .this is a reality of life , everything is going to die sooner or later and this powerful rule leads to striking ~~e~~ a balance throughout the world.

It's almost impossible to predict what will happen if man lives ~~living~~ much longer in the future, but having said that, to my mind its quite reasonable if we enhance the life-time of a genius who benefits ~~affect~~ society by useful ~~utile~~ functions including the best tutors , doctors or scientists. In other words, they will greatly increase the quality of ordinary people's life in the ~~a~~ best way.

~~By making~~ this decision it will pervades all aspects of our life, otherwise some measures should ~~could~~ be taken such as controlling the population of the countries and managing ~~e~~ all the factors which influence other people especially new borns ~~borns~~. The more people live , the less space ~~place~~ to live.

To sum up, I would like to mention that this theory is an unavoidable consequence which may happen sooner or later, yet if we do not care enough about ~~to~~ different sides of this issue the infraustructure will ~~be~~ collapse over the world.
