

Increasing the price of petrol is the best way to solve growing traffic and pollution problems.

To what extent do you agree or disagree?

What other measures do you think might be effective?

Although increasing the price of petrol is one of the ways to reduce traffic and pollution problems, ~~but~~ it is not a permanent/sustainable/dependable/reliable approach. The governments should deliver alternative methods for solving these se problems.

The result of such an increase ~~increasing the price of petrol~~ is not sustainable and has a short term effect. Because people should provide their primary needs like such as they could ~~be reached on their destination in timetime to any place they want to go~~. Thus, the governments should provide an efficient transport system as far as possible ~~better as they can,~~ . for example, they should extend the underground railroad, to make easy access to public transport system, and eventually they could either impose penalties for cars that have a single passenger seat or reward encourage low-consumption motorists ~~whom have a few use of fuels during the months~~ with a discount on the price of fuel.

Another solution is replacing fossil fuels with green fuels. Nowadays the governments in developed countries have encouraged the people to use electric electronic vehicles by with giving them subsidies ~~subsidence to them~~. In those countries one of the most important sources of energy is nuclear power such as they use it in production of electricity and it is a the ~~cleaner ways~~ of generating electricity. Alternatively, they can use have been used electricity to supply of the energies that are used in many kinds /means/mode of public transport system such as monorails. Not only could they ease traffic jams, they could protect their ~~ir~~ environment.

In conclusion, the governments should offer welfare programs to their nations by providing facilities, ~~and not neither make harder nor expensive impractical~~ solutions for decreasing traffic congestions and the many other problems that are related to those solutions. ~~them~~.
