

Alternative energy sources that use the natural power of the wind, waves and sun are too expensive and complicated to replace the coal, oil and gas that we use to power our cities and transport to what extent do you agree or disagree with this opinion?

Because of limited fossil ~~fuels energy~~, it ~~is was~~ logical that ~~states people~~ turned to ~~use~~ other sources of energy such as solar, wind and waves. It either takes more money to ~~equip facilitate~~ our cars or even use ~~it these types of energy~~ in transport systems, but we should care ~~about~~ its benefit.

Although producing power from green sources is expensive, it would be economical in long term. To put it in perspective, we ~~have needed~~ extra amounts of energy in a sustainable development; it means that huge industries, a large number of people and many cars that ~~are have~~ produced each year required energy. ~~Not only do they need much energy, but it has to be clean energy supplementary, they need clean.~~

Moreover, these kinds of green energies have helped us to have a clean environment and it leads to improvement of ~~the~~ environment. If the government ~~adopts/takes~~ these methods to produce energy and power, it will provide economic growth for society.

In contrast, we have more difficulties ~~producing to produce~~ energy from natural sources. For example, we should ~~have~~ located wind turbines in a vast and flat areas where no mountains ~~exist~~ near them. Furthermore, they ~~never~~ placed ~~where~~ any airports beside them ~~so that because of~~ airplanes could have safe takeoff and landing. All of ~~the~~ facilities or finding locations need extravagant financing and extensive or even ~~time-consuming long duration~~ studies. Besides, fossil energies belong to a small part of the world, especially Middle East and it was limited and not forever.

Nowadays the government has known that they should find other sources of energy to reduce their expenses and even reach ~~ed the~~ higher productivity. However, it ~~seems costly looks manifold.~~
