

Question:

Do you agree or disagree with the following statement?

Technology has made children less creative than they were in the past.

Use specific reasons and examples to support your answer.

Nowadays, it is commonly accepted that leading-edge technology can help juveniles to be more intelligent and novel. Contrary to this popular belief, there are still those who argue that technology such as smart cell phones distracts students from lessons and ~~takes imposes off~~ thinking away from to them. I, to a great extent, disagree with the idea that new technology devastates the novelty and creativity of children.

First and foremost, the technology is an amazing way to facilitate the way of living whether for adults or adolescents. This extraordinary phenomenon bridges the gap between the comprehension of the ideas and unknown fields because/since, forasmuch as, children want to be more up-to-date and more of a genius they use technology as a way to improve their ability, knowledge, and understanding to tackle the problems. Afterward, their matured savvies lead them to be more inevitable.

Another significant fact which should be taken into consideration is that almost all of the universities and education systems use the technology in academic levels, for instance not all the schools are not posting the lectures and assignments on the internet and a disciple has to have an opportunity to use them, so it ridiculous to call technology detrimental for the youth. An important issue is that a pupil can find the solution to of his assignments and use it them as an incentive and motive to be fructify the new thought and resolves new issues.

Finally, it is recently indicated by researches, the new ideas in comparison with the old ones are more lucrative and luminary due to initiatives in this era which have evolved because of the new inventions which ease people's life. Therefore, an individual's passion to be more creative and ambitious paves the way for being more vanguard by using technology as a best option. It is rational because the people bring innovative ideas and the new patents are increasingly being have been boosted.

On the basis of the points mentioned above, I am convinced that the technology is a phenomenon/thing/something stuff which helps juniors to be more up-to-date and prosperous. The usage of technology is inevitable unintentionally and helps students and scientists to achieve achieve their productivity. The studies have shown stipulated that technology helps people to be more creative.
