

In many countries school have severe problems with student behavior.

What do you think are the causes of this?

What solutions can you suggest?

The issue of problems ~~between among~~ students and schools is sensitive and complex. The major reasons are controversial. In addition, the matter of how we can tackle these undeniable difficulties have become a repetitive question during last decades.

There are ~~several huge quantities of conditional~~ causes ~~of to~~ these tough problems. First, it is better to find out more details about their life styles that is completely effective on pupils. And how their parents ~~brought bring~~ them up. Another notable thing is related to sorts of hobbies and games that they undertake. For instance, some parents provide their children with a variety of ~~violent or horror crucial and frightening~~ movies that have negative effects on students.

Teachers' attitudes at school play an important role in this situation, ~~too~~. They should be patient and peaceful at school and be close to their students. To manage this problem, there are some ~~suggestions advocate~~ that might be suitable. One of them is making some advertisements that raise awareness of families about important codes of social behavior and broadcast them through ubiquitous media. Furthermore, they can introduce new laws regarding some obligatory courses before starting schools through these classes, pupils can become familiar with several fundamental facts that help them in their future education.

On the whole, from my point of view the role of parents and teachers is considerable, hence the best way to settle these issues ~~s~~ is teaching them how they should ~~behavior-~~ ~~behave toward with~~ these under aged generations and let students know that their families and trainers are reliable and it is better to follow them.
