

University lecturers are now able to put their lectures on the internet for students to read and so the importance of attending face to face lectures has been reduced.

Do you believe the use of the internet in formal education is a good idea?

Nowadays, Now day many universities have this ability able to put their information and lectures on the internet for reading and it is if so prominent that our life style has been changed by it. People today still have mixed views on whether it is good or has have negative influence on the future of educationacademy.

In my opinion, there are more pluses pulses than drawbacks. The internet is a small world village where that all of people in all around the world have an-interaction with each other them and also it is a best situation where that we can share our knowledge or use new information via the internet , because of this when you do a not spend your time in university and use virtual access, it is so important since you can save your time for doing and traveling with less without any traffic in addition , you have enough time to pass through the internet and do researching for articles s instead of going out.

In fact if you find the best way in order to research and learn anything by internet, it would be a valuable source of information.

Some people argue that the internet, reduces communication between people without any emotional scenes and interaction. Here, I am referring to some examples: when you spend your time learning instead of attending to class, it causes you not to that you do not have a desirable situation for communication with other people face to face action. When you have enough time with other people, they can give you positive energy and also resolve any your any problem of yours, yet the real communication via the virtual world is impaired and diminishes our sensitive behavior.

Taking everything into consideration, in spite of many benefits/advantages/merits proficiency that the internet provides s for us, such as: easy accessibility of le information around the world without any border restrictions in board-sharing knowledge. Major factors which we should accept it in or life are is like: interaction-emotional-face to face communication are is reduced. Totally, you should integrate both technology and humanity in your life.
