

One of the consequences of improved medical care is that people are living longer and life expectancy is increasing.

Do you think the advantages of this development outweigh the disadvantages?

From many years ago, people were seeking ~~for~~ the elixir of youth. Then, living longer was an important aim for the humanity.

Nowadays, scientists discover things that increase life expectancy and help people to live longer. In fact, living longer is a controversial issue which has many advantages and disadvantages as well.

In my estimation, the advantages of this development outweigh the disadvantages.

First of all, we can have our family and ~~the ones~~ ~~one's~~ whom we love, longer and enjoy living together for many more years.

Also, I suppose when people know that they can live longer, they will be more relaxed and they won't be in a have rush and be tense for things like getting marriagemarried, collecting money or having babies. In such situations, they can live more comfortablyye and easilyeasier.

From one aspect, some people who are very useful for ~~the~~ society and ~~the~~ world, can live longer and help human beings to have a better life. However, ~~z~~ from another point of view, bad people with all their wickedness~~'~~ will live longer as well.

In relation with/as for the disadvantages, the pressing issue of this development is increasing the population which may cause lots of problems, although scientists have been finding remedies like living in other planets.

Also Regarding ~~to soaring~~/increasing/the increase in the age of marriage and having children, the population will be old and in this case, ~~the~~ society will get involved with problems.

To wrap it up, despite ~~of~~ the fact that living longer is an interesting issue, I am doubtful if ~~living longer~~it makes s me happier. In my humble opinion, the quality of living is more important than its length/the length of it.
