

**In the last twenty years there have been significant development in the field of information technology for example the World Wide Web and communication by email. However, this developments in it are likely to have more negative effects that positive in the future. To what extent do you agree with this view?**

It is more than two decades that people have been involved with IT all around the world. IT has changed people's life, and forms of communications. Although this technology has had positive achievements, ~~there have also been~~ ~~it also has~~ some negative impacts.

At first, development of information technology ~~have~~ ~~has~~ made our life much easier ~~/facilitated our life so~~ that ~~/such that~~ we cannot live without ~~them~~ ~~it~~. Email has made our communication simpler and faster, especially in business ~~so~~ that you can get education or all news all over the world. For example, you can earn money from ~~e-commerce~~ or advertisements ~~s~~ on the Internet.

On the other hand, it has some drawbacks too. Using Email services has destroyed our traditional communication methods like speaking on the phone and face-to-face conversations. Virtual communication and social networks ~~has~~ ~~have declined-decreased~~ people's close connection with real life.

From my point of ~~you~~ ~~view~~, although technology has some adverse effects, its advancement could not be stopped. Totally, development and technology always have negative and positive effects and the best way is to manage them because technology is essential for life quality improvement. Its benefits are more than its detrimental effects, and we should prevent any ~~possible damages/harm~~ ~~hurt~~.

In conclusion, technology has ~~led to our convenience~~ ~~/made our life easier~~. It has some ~~downsides/demerits~~ ~~/bad points~~ but the advantages outweigh the disadvantages. We must use it safely and try to use it whenever it ~~is~~ needed.

~~As the saying goes~~ ".....".
