

students going abroad for studying. agree/disagree

Going abroad has different aspects. I think it depends on your own country, your country's university, the quality of education, work, society and all situations that make you against your feeling, leave your common life and make a new one in a new country with a foreign language.

In light of this topic subtitle, I can say positive and negative points - that people aren't able to study in any field they want, they feel that the level of education is not enough and ~~can not~~ cannot satisfy them. I think the better way is immigration and going abroad to find a university that can convince them. For example some fields don't have a phd or a master's degree because they are new and in our country this field is not as much known as other fields. In this way staying in their own country makes the people who that have many wishes and much potential ~~many potancial~~ to work hard and improve in their life ~~can~~ be ~~surpass~~ suppressed.

I think for going abroad personality is more important. As I see for example there ~~is-are~~ people that are so sociable that go in other countries where there are not have any sociable people and they're going to be depressed. At the end I think this is an important ~~disicion~~ decision that we should make. And of course having distance is so hard for families and they should just have communication with the internet and social programs ~~sm~~ like telegram, skype, viber and .... I think it's hard to grow up 20 years with your family and suddenly make a ~~disicoin~~ decision to go abroad and be alone. In my opinion ~~iff-if~~ if you intend want to go to study in-overseas you should have financial support, because I think if students go there and simultaneously study and at work, it is so hard, at least for the first year because you ~~just jast~~ go and try to adjust yourself you-self.

If we have the courage to change our lives and we are not satisfied we can go abroad. Of course many people are never be satisfied and always complain about their situation. I think as-to what people what should do is it's better to be consulted with some ~~one-one~~ like a consultant or some ~~body-~~ body that knows all things about your own personality or your country's university. At the end I think we should do something that our heart and brain together cover it and try our out best and improve so that we never regret it sigh-for that.
