

Task:

Reducing global environmental damage should be handled by governments rather than individuals.

To what extent do you agree or disagree?

Nowadays, ~~how to conserve~~ conserving the environment from global damage is known as an area of concern among many individuals. Experts have different views about whether it is incumbent upon governments to take responsibility or individuals have to take action personally in this regard. I, personally, believe this problem will be resolved (settled) with cooperation of both.

On the one hand, I think governments play a vital role in protecting the earth by introducing some kind of laws. From my perspective, governments should create laws to require large corporations to reduce their carbon footprints which ~~are-is~~ produced by using fossil fuels and ~~causes~~ sd the depletion of the ozone layer, also they can support the factories which manufacture Hybrid, electrical and biofuel-driven vehicles. In addition, statesmen should develop the infrastructures in order to harness solar energy as well as the power of the wind to generate electricity.

On the other hand, the role of the members of the public's ~~role~~ should not be neglected in this regard. Nowadays, due to the huge amount of waste ~~which is~~ produced by mankind, soil and water in many areas around the world are contaminated (polluted) which is a major threat to the environment, so considering proper methods that can control this trend is a must for any individual; for example, using recyclable products besides renewable resources can reduce the water pollution. Simply put, the less garbage in water, the less extreme damage to nature.

In conclusion, I believe the best approach to ~~have~~ having an environment with less ecosystem damages is just provided by close cooperation and coordination between governments and individuals. In other words, the more cooperation, the less our catastrophic environmental footprint.
