

A large number of deaths are caused by road accidents. Why do so many road accidents occur? Make recommendations that help to reduce the number of road accidents.

Many people are victims of traffic accidents around the world, which is going to be more and more serious every year as a result of massive car productions. In my opinion this catastrophic situation can be better if we pay more attention to the traffic rolls rules and even by more using of public transportation system.

One factor which has lead-led to car accidentss is exceeding the speed limit/allowed speed by drivers. According to the statistics this is the cause of more than 24 percent of transportation accidents. Another factor having the second place is driving with lack of sleep. The rest of the accidents are often stem from driving while doing another activityies such as arguing or talking with other passengers, listening to loud load music or driving after consuming alcohol or drugs.

Developing a better public transportation system and encouraging people for using to use them-it instead of personal cars is another treatment for this problem. In addition, to alleviate the rate of these accidents, governments should raise the fines for bad reckless drivers and even be more serious in training people before giving them the driving license. Furthermore, Farther-more, they ought to spend more bigger budgets on improving highways and adding more traffic signs in roads.

In conclusion, I would argue that both governments and individuals should address this problem. Governments should provide better conditions and rules roll and regulationss for drivers and each of us should be careful of our driving habits and try to substitute public transportation with personal carss, when possible.
