Some people believe that teaching children at home is best for a child's development while others think that it is important for children to go to school. Discuss the advantages of both methods and give your own opinion.

The suitable way of education at school has sparked a heated debate among researches. Some believe that studying at school is more beneficial than staying at home and having some private teachers or taking online courses.

~~Going to/attending/~~Studying in a traditional school, pupils can socialize with their classmates and teachers. In addition, they should respect some rules at school such as wearing ~~accurate~~ the required uniform and being punctual. Furthermore, they become aware of the importance of being organized in life. Not only do schools consider a pedagogical area, but also it is a place in which students are ~~thought~~ taught regarding some codes of ethics, hence ordinary schools are the best choice to some parents who are not capable of supervising their charges because of their hectic life styles.

Educating at home could be attractive to students who live in a country where advanced educational facilities are not accessible ~~to them~~. In addition, this way of learning is cheaper for them. What is more, learners who study at home follow the curriculum independently, whilst teachers at school allocate some homework to do at home and parents should help their offspring.

On the whole, I, personally, assume that studying at home is an appropriate way to university students. However, pupils should be exposed to school atmosphere that is completely effective for their future life.
