

Nowadays we are producing more and more rubbish. Why do you think this is happening? What can governments do to help reduce the amount of rubbish produced?

That we are living in an industrial world is an undeniable fact, hence most manufacturing processes are done quickly and this situation lead people to suffer from huge amounts of garbage. this essay will discuss the vital major reasons and solutions for this disaster.

One notable cause could be advertisements which. People are exposed to ~~numerous advertisements~~ through ubiquitous media which and it motivates them to become materialistic and buy some useless items because these television programs psychologically affect~~ed~~ them and make them think they should buy each ~~stuff~~ items/goods/commodities they see. In addition, the increasing ~~the world's~~ population has posed some difficulties that are easily solvable by mass produceding materials. The case in point is lack of adequate living place space which is a basic requirement and an important reason for producing garbage.

There are an enormous number of solutions one of which is associated with notifying inhabitants regarding the implications of their deeds and possible problems of consumerism that is conductive to producing trash. What is more, allocating certain proportion amount of the budgets to some factories in which garbage production is in a high rate or even warn them with financially fineing because of the detrimental effects of their routine process on the environment. For example, some factories are completely reluctant about the true way of transferring waste to a certain place /landfill. Furthermore, taught teaching true ways of living, people become aware of their wrong actions during their routine life and how making a simple change could be beneficial toward for the environment.

On the whole, I, personally, believe that the government had better allocate certain sums of money to find the major reason and resolve the problem in an effective way.
