As populations grow and cities become more crowded, there is pressure throughout the world to construct ever taller buildings to provide accommodations and offices. Many people object to such developments, citing the social as well as physical dangers. What benefits do skyscrapers bring? Do you agree with the objection to skyscrapers?

In today's world, lack of ground space is a matter of concern to people ~~how~~ who live in a limited space. Long time ago they were keen to live in houses which are close to natural landscapes and great gardens but Now owning to overpopulation and restricted land space they tend to live in high--rise buildings. This trend will ~~has~~ continued till new city formations have ~~has~~ formed.

The most obvious advantage of constructing skyscrapers ~~are~~ is saving ~~remote side~~ pristine areas and wild life,. imagine life without these unspoiled areas is unbearable and boring. This modern accommodation can bring several benefits for local residents and immigrants who commute every day, for instance, cutting extra commute and decreasing road accidents.

The next positive aspect is ~~I would like to consider~~ the cost of living in these cities cannot be rising, because one can find a suitable flat with low rent price or buy it ~~with~~ at a reasonable price. This matter reduces some tensions and stresses ~~between~~ in local people' life. Additionally, their social issues become stronger and happier.

All things considered, one can conclude in the past high blocks of flats were not agreeable for most ~~of~~ People, hence they prefer to live in a large house without an artificial atmosphere and design but now in terms of ease of lifestyle ~~approach~~ has changed because ~~new~~ modern problems have been created and should be solved.
