

Nowadays more tasks at home and work are being performed by robots. Why do you think it is happening? Is it a negative or positive development?

With the advantage of technology, robots have replaced human beings. Not only in factories, but also they are used in house chores. They had-have both benefits to society and disadvantages.

Nowadays, new technology has a key role in our life. Besides, it facilitates our life with-by applying of various kinds of gadgets in every house. A case in point, all kinds of machines that we use for washing and cooking in the kitchen. Moreover, compared with the past, utilizing modern technologies lead to time saving, and thereby as a result people can dedicate their time to more important things. The other benefit of using robots is in factories. In other words, some of the work done by people at the factories is dangerous for health, especially in chemical factories.

On the other hand, technologies cause to many social illnessesills, such as unemployment. To put it simply, the productivity of robots is several times that of individuals, due to the fact that they have designed and managed with the-a smart and accurate program, whereas human errors in people are inevitable. Besides that, using of technology leads to environmental pollution. Although it seems we help reduce pollution, producing the power that uses technology is through fossil fuels, by the same token this has led to global warming/the heat of the earth.

In a nut shell, the topic of robotics is you raise an important issue. That robots ease our life is indisputable, but they users/proponents/advocates of robots cannot shirk their responsibility of environmental pollution. However, using-use of modern technologies are-is on the rise and it is incumbent on us to use them in an appropriate way.
