

Some people say it is the government's responsibility to fund school buses, while others think parents should be responsible for bringing their kids to school. Discuss both views and give your own opinion.

There is a controversial topic amongst people who believe that the government should pay or at least subsidize school buses, while some opine that parents must be in charge of bringing-taking their children to school. Beyond the a shadow of a doubt, both viewpoints have their own benefits and drawbacks, but when it comes to such an arguable topic I strongly hold the idea that school buses should be funded by the state treasury, and parents can focus their time on more important subjects.

Clearly/Beyond a shadow of a doubt spending on education is a kind of investment, and that is why many people believe it is incumbent on the government to provide free transportation for schools as a part of the educational system. In other words, free transportation for school children and teenagers provides them convenience, and this can lead to a better performance of them because they can focus/concenterate more on their subjects. In addition to this, children whose parents do-cannotnot afford paying- their transportation to and from school can be present at their classes regularly.

On the other hand, there are so many who argue that transportation of school children is a part of their parents' responsibility, and should be undertaken by parents. They think if parents do this part, the government can spend more on the education system such as building new schools, re-renewing old schools and providing children with updated educational materials. In addition to that, parents can undertake the responsibility of more than their own kids, and this can be a source of income for families.

To eput it in a nutshell, I can say that my vote goes for funding school buses by the government because I believe it is a cost-saving way of transportation and can teach children punctuality and in addition to this, school busses are safe and can further reduce air pollution by personal cars.
