

Some people say that artists such as painters, writers and musicians affect our life more than scientists.

To what extent do you agree or disagree? Give reasons for your answer and include relevant examples from your experience.

There are those who maintain that artists have enormous impacts on people's life and in this way give them a major role. However, it would seem that this idea ~~are-is~~ is not fair enough when we look carefully ~~in~~to scientists' accomplishments.

Primarily, it seems that our modern life has been established by results of scientists' achievements. Nowadays we cannot live without facilities and supporting of new technologies that are results of scientists' ~~'s~~ endeavour. For instance, before ~~the~~ discovery ~~ing~~ of penicillin every year thousands of people ~~would~~ died from simple diseases, ~~;~~ however, these illnesses are cured just by taking a pill. Moreover, scientists have significant impacts on our perception of the world. Before new progresses in science, we were living in our imaginary world ~~that was~~ overloaded by many myths and superstitions. These superstitions had ~~leaded~~ ~~led~~ ordinary people astray to believe ~~in~~ some unwise ideas and do some unreasonable actions like ~~the~~ war. However, science has discovered many main reasons of phenomena which ~~once~~ ~~day~~ we linked ~~them~~ to supernatural powers.

Apart from scientific ~~ce~~ progress and its direct effects on our life, it appears that many philosophers and artists are affected by achievements of scientists these days. Many new genres in music are influenced by new technologies, and artists employ new instruments in their works and a lot of philosophers and great writers get ~~/~~derive their ideas from scientists' outputs and these progresses ~~aim~~ ~~aid~~ them ~~to~~ ~~in~~ thinking out of the box.

In conclusion, although it seems that we are more influenced by some artists like musicians and novelists, due to the fact that their outputs are quite likely more accessible and understandable for us, we should be aware that most of the great changes in our life are fruits of modestly calm scientists' success.
