

Q:

Increasing the price of petrol is the best way to solve the growing traffic and pollution problem.

To what extent do you agree or disagree?

What other measures do you think might be effective?

With proliferation of vehicles in highways and roads, humans faces new problems such as growing traffic and pollution. To my understanding, increasing the price of fuel can be a solution for these problems but it is not sufficient. To ~~reveal~~ relieve traffic congestion and decrease the pollution, we should do more like improving transportation infrastructure and increasing social awareness of the devastating consequences of these problems.

To begin with, growing traffic and increasing air pollution are two crucial issues which the governments have to grapple with ~~them~~. Imposing

~~fat heavy~~ taxes on ~~the~~ fuel is one of the solutions that the governments should ~~do~~propose. Increasing ~~the~~ price of fuel might deter people ~~to use~~using their personal cars. However, imposing additional taxes on petrol can increase other relevant products 's price which may lead to snowballing effects ~~on in~~ ~~the~~ society and ~~at the end of the day~~eventually leads to inflation . Hence, it should be more effective if all aspects of this issue be incorporated before introducing new prices for ~~the~~ fuel.

Last but not least, to tackle the traffic and pollution problems, all members of ~~the~~ society should be involved. The problem of growing traffic in big cities has reared its ugly head. People are prone to high stress situations and air pollution. Although much ink has been spilled over this issue, nobody really cares about the issue, neither ~~the~~ government nor people. Increasing social awareness about the negative implications of air pollution is another way to convince people to use public transportation

instead of personal cars. People should understand that ~~charity~~the fight begins at home. According to “Healthy Life “ magazine’s survey , conducted in 2017, not only does air pollution decrease human life cycle but also leads the human immune system gradually to be destroyed . In the light of the survey’s result ,it is imperative that people use public transportation and governments should improve public transportation infrastructure. In addition, governments should introduce very competitive prices for bus and train tickets which increase their popularity~~of using these vehicles~~.

To sum up, growing traffic and pollution problems are critical ~~problems~~ones which should be kept under control. Increasing the price of petrol, increasing social awareness and improving the public transportation system are proposed solutions.
