

◆ People living in the 21st century are enjoying better quality of life compared to people who lived in the previous centuries.

◆ To what extent do you agree or disagree?

It has been argued that the ever-rising quality of people's living in the present century in comparison with last century causes major segments of individuals ~~should to~~ be satisfied rather than past. I, for one, assert that the influence of excessive development in technology on quality of people's living plays a leading role for such satisfaction.

The main obstacle ~~would used to~~ appear to be a lack of communication, and citizens ~~simply~~ suffered from a shortage of access to information ~~simply~~, but according to developments in technology these days people could widely get access ~~for to~~ any data in terms of economically developed development, medical research, and scientific methods ~~and so on~~. It has resulted in enhancing people's ~~circumstance condition~~.

A further well-known reason is that by supplementing artificial intelligence with human's wisdom in the 21st century admittedly ~~contributes leads~~ people to having less physical ~~activity/works~~; therefore, people's living can be facilitated, and they have more leisure time.

One final point against this proposal is that currently, various recreational activities bring about ~~delight in~~ people ~~becoming more delighted~~. Plenty of activities are created, for instance, aquatic and air sports ~~and so on~~. On the other hand, Although quality of people's living is improved, ~~but the~~ ~~men mankind~~ cause irreplaceable damage such as environmental degradation which includes discharging chemical waste into rivers, depleting natural resources, ecological ~~crisis crises~~ and deforestations ~~which~~ all of ~~them which~~ will endanger next generation's ~~lifeliving~~.

In conclusion, people's circumstances ~~have improved raises up~~ in comparison with ~~the~~ past, but ~~it is better that~~ individuals ~~had better should~~ be wary of living in the future. As a result, a remarkable factor which leads to improving quality of population's living of the 21st century is technology.
