

Some people use the Internet to search for solutions to their medical problems. Is it a positive or negative development?

Give your own opinion and examples from your experience.

Today many people before talking with a doctor try to get information about diseases via the Internet and sometimes the Internet is substituted with specialists. It seems that this self-diagnosis is not still a safe ~~confident~~certain method and there are some crystal clear facts that warn us to stop it.

Primarily, most of ~~the~~ data on the net are not reliable and collected by Non-specialists. The ~~natural~~nature of the Internet and this fact that everyone can contribute to developing it result ~~to~~in this condition and there is no ~~any~~ audit organization who monitors all of ~~these~~this medical information. Moreover, ordinary people are not usually trained to recognize reliable websites from those ~~who~~which provide fake or useless medical information. People just google, and view the first page of search results and fancy that all ~~that~~the data are correct and it may cause them to do self-medications.

Secondly, the medical diagnosis is one the most difficult processes in science and just a bunch of information in some websites could not help people to treat themselves. Although computer and medical scientists are endeavouring to introduce a simple machine ~~who~~which could diagnose the medical problems by knowing their signs, almost all these ~~tries~~efforts have faced ~~with~~ failure. Even by usage of artificial intelligence, there is a long way to achieveing this point and now how can we imagine that it would be easy to find our medical problems in these unsophisticated websites??

In conclusion, while the Internet has an undeniable role in development of science and it has ~~make~~made communication so fast, it is too soon ~~that~~weto replace doctors with it and we should know Google is merely/just a search engine and the Internet contains tremendous amounts of unprocessed information needing an expert brain to analyse.
