

Researches indicate that the characteristics we are born with have much more influence on our personality and development than any experience we may have in our life. Which do you consider to be the major influence?

Scientific and physiological studies shows that congenital manners have ~~plenty-of~~more influences on one's personality and growth than adventitious experiences in life, which on the contrary I believe otherwise and will explain it as follow.

As far as I am concerned, there are some characteristic points which are inheritable, such as intelligence and appearance, but these items/qualities are not comparable with our ~~adventitious-acquired~~ experiences in life. As an ~~infantile~~infant, we learn everything from our parents like gestures and habits. One step at a time, we learn more from our environment and people. After that, we are ~~approaching-are exposed to~~ different behaviors ~~in-order-to~~and follow our teachers, friends, society and even media.

Many people claim that if you have a talent in a field you will be successful in it. However, in my opinion for approaching a goal we need to hold on to our target and practice more than depending on our talents. Although intelligence is inherited, if we want to approach ~~to~~ the knowledge and wisdom about a specific matter, without effort, experience and testing process we might not be able to achieve it.

In conclusion, to be born with talent and ~~wit~~ting does not mean that we have everything, because even without special gifts, it is our experiences, struggles and communications in life which leads us to gain whatever we wish to. To this end, we choose our way considering everything we have learnt during our life so ~~ad~~acquired~~ventitious~~-learning ~~have~~-has more impact on our lives.
