

Global warming is a steady process of continuous rise in the level of Earth temperature. Global warming has become one of the biggest problems faced by the world now. It is believed that increasing level of carbon dioxide gas and other greenhouse gases on the earth are the main reasons of heating the atmosphere of earth. If it is not noticed and solved immediately by the efforts of all countries worldwide, it would ~~boom-go out of hand~~its-effects and cause end of life on the earth somea day.

Its threatening effects are increasing day by day and creating danger for human life. Global warming is the main and only reason of rising sea levels, flooding, changes in weather patterns, storms, cyclone, epidemic diseases, lack of food, and death. The only solution to solve the issue of global warming is increasing the the level of an individual's level social awareness. People must be aware of its meaning, cause, bad effects and other things-concerns about global warming to get it eradicated from the surface of the worldwide and make the possibilityyies of life on earth forever ~~as-usual~~.

People should stop producing CO₂ by just stopping their bad habits such as stop the use of oil, coal and gas, inhibitting cutting plants (as they are the main source to absorb carbon dioxide and produce oxygen), and minimizinge the use of electricity. With Just small changes in everyone's life all over the world, we can-will be able to stop the huge negative changes in the atmosphere by lessening the effects of global warming and even stopping it a day.
