

Nowadays, the most important task is the environmental protection of our planet for future generations.

To what extent do you agree or disagree with this statement?

There is a controversial question as to whether avoiding environmental degradation is a remarkable function or not. I, for one, assert that one of the most vital issues is ecological crises which might endanger next generations' life.

There are several factors in order to support this perspective. First and foremost, discharging chemical wastes into rivers, oceans and seas causes the natural resources to be destroyed. Therefore, the humans, the next generation in particular, will not have adequate energy sources and agricultural produce in order to use and consume. Secondly, fabricating ~~the a~~ countless number of cars, manufacturers and companies daily increase carbon footprint in the environment by which I mean car fumes have extreme effects on ozone layer depletion as well as global warming. It must be said that these days, our planet suffers from climate change, and alteration of climate patterns is one of the most crucial phenomena.

There is no doubt that had former generations developed renewable energy sources in lieu of ~~over-consumptionj ing overuse~~ of natural resources, we would not have had environmental issues. Our generation has a responsibility so as to take decisive action on global warming, and utilizing bio-degradable products ~~sions~~ which are environmentally friendly, . people can preserve the environment for the next generation. Future children will not have any food or water ~~in order~~ to consume unless individuals currently join the green movement, and do not deplete the natural resources.

In conclusion, from my point of view, protection of the environment should be an urgent priority due to this fact that next generations' life will be relevant to today's action of ours, and it is not reasonable that we neglect this prominent matterfunction.
