

International tourism is now more common than even before. Some feel that this is a positive trend, while others do not. What are your opinions in this question?

As opposedd to the past, over the last decades traveling overseas has become much more popular ~~between~~among people. Some researchers assert that this phenomenon is beneficial for countries, however, some others assume vice versa.

From my point of view, travel makers bring investment to their destinations. In other words, the authorities of the place ~~are~~which is chosenn as a suitable environment for having a leisure time need to provide some convenient facilities such as hotels and shopping centers for travelers that leads them to spend enormous sums of money during their vacations and is economically profitable. What is more,l being in touch with different and new cultures and life styles, members of the public can take numerous benefits. For instance, they may establish a friendship with ~~passengers~~foreigners and become aware of diversee ways of tackling problems in life. Further and even more importantly, through drawing a comparison between their achievements and **those of** others ~~in~~ the same age but different countries, the young generation will be familiar with their position in the world. It could be a beneficial way to trigger them to be perseveringance and move up the career ladder.

On the other hand, some researchers fervently reckon that concentrating on ~~abroad~~ traveling abroad reveals some drawbacks. The case in point is accepting people who live in distant areas with the goal of improving the economicy situation is at the expense of transferring contagious diseases ~~that~~ some of which ~~are~~were eradicated many years ago. In addition, holiday makers make their destination crowded and disturb the balanced and calm atmosphere of the country.

By way of conclusion, I once again reaffirm my position regarding the issue of international tourism. I believe that the governments had better allocate certain amounts of money ~~on~~to it and draw both cultural and economic benefits.
