

***Some people think that the buildings such as flats should be designed to last a long time. Others believe that it is more important to provide accommodation quickly and cheaply.***

Accommodation is a vital issue that makes the human's world go ~~es~~ around. There is a range of different views on the question as to whether constructions which are sustainable and built in ~~the a~~ long run are more preferable than that at a rapid rate with a relatively cheaper price. Although a home, whether an apartment or a house, ~~with at a~~ much ~~more~~ affordable price which is built in a short-run sounds appealing, it is the choice with a feasible safety and low-price guarantee.

It is better ~~to start starting~~ off with ~~a~~ more logical point of view. What I mean is to make a building more appropriate for so many years ahead to stay in. As I mentioned in the former paragraph, accommodation plays a crucial role in every individual's life, so the quality and design of architecture is as significant as water and air. Moreover, safety and the sense of feeling secured within your place is a remarkable factor which stems from high quality planning of construction. That is to say, not only is a top quality structure important for our physical health to feel immune within, but also it is important to feel your home as ~~is~~-a safe place, psychologically speaking. To illustrate more, there are cities and villages ~~where which were~~ ruined in consequence of ~~an~~ earthquake; had their buildings ~~been~~ erected far more ~~sustainable~~~~sustainably~~, thousands of people would not ~~have~~ died.

On the other hand, low salaries and lots of difficulties make people vote for the opposite view. They assert that ~~the~~ instant process of buildings and affordable prices are all ~~what that~~ they need. Their perspective, however, is entirely understandable, ~~but~~ the result is nothing but a temporary satisfaction. By poor scrutiny along the process of constructing that leads to complet~~inge~~ the place far sooner, you take your life ~~at in a~~ risk by living in ~~such homes~~.

By way of conclusion, there is no doubt that ~~the~~ two points of views have their specific pros and cons, but I firmly maintain that it is better to wait a bit more and carry more efforts to purchase a comfort~~able~~ home which is guaranteed for a lifelong. At last, it is worth mentioning the belief of English people who say, " I am not that wealthy to purchase a cheaper one \_object\_ ~~./ "I am not rich enough to buy cheap things"~~
