

Many believe that technology has brought many advantages to worker's life. Other say that it's disadvantages are more. Discuss both side and write your idea.

People have different ideas about whether or not the advantages of technology are more ~~that~~ than its drawbacks. ~~Into to~~ some extent, I believe that technology has brought more merits to people's life compared to the past.

In today's modern society, technology plays an important role in different aspects of human life. Firstly, It contributes to workers ~~to dedoing~~ their job faster with computers accompany in- compared with the time period before computer invention. For example, ~~Graphics graphists/graphic~~ artists drew their sketches with hand ~~that itwhich~~ took a lot of time. However, today, they do their sketches with different software programs which are not only professional and suggest various options but also can do the tasks in a shorter time. Secondly, technology has had extremely positive impact on communication globally. For instance, nowadays people can make voice or video call ~~with-~~ to their relatives or friends around the world by using different applications on their smart phones, which ~~it hasseemed~~ impossible in recent decades. It translates into coming true our ancestor's dreams coming true. Lastly, robots are the foremost technology invented these days which are targeted to ~~be-~~ replaced with humans in near future in order to ~~descend-reduce~~ the human work pressure and contribute to doing the tasks rapidly. So technology could be useful from different aspects.

Apart from all the advantages mentioned above, from the negative point of view technology has some drawbacks as well. As the life pace is getting faster due to using technology, people must live ~~in-a~~ fast-paced life in society and they are all in a hurry, consequently. It translates into spoiling personality through modern life, because people always have to work to adopt-adapt themselves ~~with-~~ to the with the pace of modern life. Thus they have less time to spending personally. On the other hand, it is noticed that youths are more familiar with technology particularly those related to communication, so parents and ~~adolescence-adolescents~~ may have some problems with using new applications and it may not contribute to bridge-bridging the generation gap. For example, once young generation work with their smartphones their parents will feel alone at home. Because of these reasons it is understandable that some are believe in more drawbacks with technology.

To recapitulate, there are convincing arguments both for and against the technology but I believe that the benefits are outweigh its drawbacks.
