

The continued rise in the world's population is the greatest problem faced by humanity at the present time.

What are the causes of this continued rise?

Do you agree that it is the greatest problem faced by the human?

It was just 3 years ago ~~that it was the~~ once announced that the total ~~amount-number~~ of individuals on the earth had just passed 7 billion, which made many intrigued while some others felt anxious due to their anticipation about how to cope with it.

~~They there~~ may be some reasons that lead to this increase. ~~One~~ important factor is the overall improvement in ~~healing health care~~ systems that support people to survive more. The general condition of hygiene has been enhanced and there ~~is-are~~ not that ~~much-many~~ contagious diseases infecting individuals. These developments have ~~been-made~~ crucially immune ~~even~~ fetuses ~~to be born given birth~~ with the least possible disorders due to any probable contaminations ~~exists-existing~~ in water or food.

On the other hand, ~~now-a-daysnowadays~~, agriculture ~~industry~~ has flourished and ~~could-been able to~~ provide society with definitely more crops as a result of innovations ~~advent-existing~~ in this area. Modern irrigation technologies and ~~emergent-emerging~~ types of fertilizers and pesticides have ~~been~~ substantially ~~descent-decreased~~ the efforts needed to ~~harvest-cultivate~~ while it could dramatically ~~ascent-increase~~ the amount of ripe and fresh fruits and vegetable could be reaped. Furthermore, this sustainable cycle could protect us from any further disastrous phenomena ~~just~~-like drought and flood.

However, although this explosion of population seems to be a catastrophe, it could be controlled in a way that its benefits outweigh its costs. the best method is to allocate proper portion of resources to consume and plan to replenish them for future. In addition to it, by recovering waste materials instead of just throwing them away, or by harnessing the solar energy and starting a green life, the drawbacks could be ~~descent-reduced~~. ~~Heading-heeding these this~~ prescription may lead us to the point that not only is ~~it~~ not ~~its-a~~ calamity but also it could be advantageous.

In conclusion, unbalanced distribution of resources in the world, ~~has~~ made many ~~taughtful-thoughtful~~ about the population up to the point that they presume it as the most ~~important~~ issue of the humanity. But pay~~ing~~ enough attention to the main causes and ~~manage-managing~~ to make suitable provisions could ~~reach-take~~ us the point ~~to-of~~ catering~~ing for~~ them without any special suffering.
