

Nuclear technology should be used for constructive purposes

Nuclear power is the most important invention in 20th century. Like other inventions s it has both positive and negative effects s on peoples' life. I think nuclear technology should be used for constructive purposes.

Nowadays nuclear power is in high demand. It ~~uses~~ is used in medical science. x-ray, medical diagnosis, radiography and every kind of radiation which are curing malignant cancerous cells are positive uses s of this invention.

As fossil fuels are coming to an end, nuclear power can be a great source of energy to countries that are struggling for ~~electricity~~ electrical power or other kinds s/forms of energy that are related to nuclear power.

Besides the ~~scarcity~~ scarce supply of energy, the world is facing pollution challenges. Nuclear power is much ~~a more~~ cleaner energy to use without imposing contamination ~~to~~ on the environment.

Power ful countries use nuclear power for military purposes. They make big investments ~~to~~ in Belligerent weapons and ~~atoms~~ atomic bombs, which face the world with disaster and destroying.

To use nuclear power, there are ~~agree and disagree~~ opposing ideas. Those who ~~are~~ agree, ~~tell~~ argue that it can ~~be~~ used under safety precautions. Those who ~~are~~ do not agree think of ~~the~~ danger of nuclear weapons. Debates around this subject ~~is~~ are so sophisticated.

In conclusion, we have to bear in mind using ~~of~~ this invention depends on ~~the~~ government that is commanding. If it is in ~~the~~ right hand and handled properly, it will be used for true benefit of the mankind and peoples' life will improve.
