

Some believe that modern technology has made people less socially active, while others disagree. Discuss both views and give your own opinion.

These days, ~~developing-development of~~ technology ~~leads-has led~~ to being closer to each other. We live in an era ~~which-where~~ technology ~~has changed~~ our lives in numerous aspects such as purchase, communication and social interaction. Despite all ~~the~~ benefits obtained from these technological devices, there are still some people criticizing these achievements as the main reason for an increasing alienation from society.

Technologies such as the Internet have fundamentally revolutionized communication's framework. Although there are numerous potential hazards **entailed** in new technologies, several benefits can be gained if they are used in moderation. One notable advantage of utilization of the aforementioned technologies appears to be a greater opportunity for those who are living far from their family such as international students who are now capable of making either video or voice calls to their family via the Internet platform. In addition, many may argue that ~~people, particularly~~ ~~those~~ who are not adequately confident to establish new friendships in the real world, now can find new friends owing to the prevalence of social networks.

On the other hand, a great number of individuals cite that new technologies would widen the gap between individuals within a society. some people believe that ~~the~~ new generation squander their time chatting with their virtual friends ~~behind-in front of~~ their personal computers instead of having time with their family or friends. Moreover, children as the main victims of the widespread use of modern technologies might become afflicted by isolation. For instance, they ~~appeal-prefer~~ to have more followers on their

Instagram account rather than spending their time in the real world. This behaviour, if not controlled, can result in a generation with lack of proper social skills.

In conclusion, although the danger of isolation cannot be explicitly denied, with regards to plausible benefits, I believe that mankind can take the positive aspects of new technologies if excessive use will be avoided.
