

Explain some of the ways in which humans are damaging the environment.

What can government do to address these problems? What can individual people do?

People are responsible for some of the damaging to the environment. We should take responsibility to solve these problems. This essay will discuss both government and individual measures to address these issues.

Two great threat of environment which comes with people are air pollution and waste. Gas emissions from factories and exhausted fumes from vehicles can lead to air pollution. As the population is growing the production of waste is rising as well, by using goods such as bottles, plastic etc. insisting on to this trend can have a devastating problem to the earth planet in the future. So that, all the people should be aware about the consequences of their harmful activities against the environment.

The government has responsibility to eliminating these problems by enforcing appropriate laws. For example introduce green tax of gas emission for factories or encouraging companies to use renewable energy resources in order to reduce the air pollution because the ingredients of fossil fuels spread contaminant to the air. Furthermore, providing encouragement facilities for citizens to reduce home waste such as dividing litter from home policies. Finally, promoting public knowledge about global warming and the effects of that could be used as preventive solution.

On the other hand, individual people have dominant role in damaging environment. They can contribute to reduction of air pollutant by using more public transportation instead of driving. Besides, they can use commodity with less packaging or some shopping centers suggest renewable bags, so it can be used instead of plastics. At least people can use more variety of plants in their home, gardens or even at work which, not only has positive visual effects but also can contribute to fresh air.

In a nutshell, both government and individual people must play their part in looking after the environment.
