many people believe that the use of new technology improves lives of employees. Others think it is a disadvantage for them.

Discuss both views and give your own opinion.

Although the increasing use of up-to-date figures facilitates our lives, especially <u>of those</u> ~~people~~ who work in large factories, some opine that<u>,</u> it has negative effects on their life.

First and foremost, with the advent of new technology, employees <u>enable</u> perform their jobs from their home or anywhere else that is named "Work From Home". As a result, people are no longer required to commute to their work place ,and carry out their daily routine <u>hob</u>. Moreover, the lower the <u>number</u> of <u>cars</u> travel, the lower air pollution from traffic fumes we have. Last but not least, people get more opportunities to spend face time on their family members. However, that working is time consuming is undeniable whether in home or in the office. In my estimation, new technologies pave the way for people to spend more quality time with their <u>beloved one's</u>.

On the other hand, the flipside of this is efficiency of an employee's work. To put it simply, due to the fact that they are not under supervision, some of <u>whom</u> do their careers carelessly. In addition, the evolution of high-tech has disadvantages. A case in point, <u>...</u> dependence upon new technology. Besides, man no longer needs to think. Even if <u>the</u> <u>calculation</u> is a <u>good</u> invention, man no longer makes mental calculation and no longer works in his memory. From my point of view, technology and its effect on modern society <u>are faced</u> society with unemployment. In some areas, devices can replace the human mind.

In conclusion, if utilizing modern technology is used properly, it can be a great solution, particularly in dangerous situations. Despite its merits, it has some directly negative influence on our society <u>which incumbent</u> on both us and governments to tackle this issue.
